

TRUONG THAI NGOC TOAN

☎ **P:** (+84) 0326724046 ✉ **E:** truongthaingoctoan@gmail.com 🌐 **G:** <https://github.com/ITDSIU19057>

EDUCATION

International University, VNU HCMC

Bachelor of Data Science

• **Encouragement Scholarship** - Sem II 2020-2021 and Sem II 2021 - 2022

SKILLS

General skills: Data Analytics , Machine Learning, Computer Vision, NLP, Data Structure and Algorithms,...

Languages : Python, SQL, Java

Database : Microsoft SQL Server, MySQL

Framework : Scikit-learn, Pandas, Numpy, Matplotlib, TensorFlow, Keras

Streamlit Tools : VSCode, Jupyter Notebook, Google Colab, Github, draw.io, Microsoft Office, Power BI

PROJECTS

Car Detection with YOLO

Personal Project

- Built a YOLO model from scratch
- Applied yolo_filter_boxes, iou, non_max_suppression
- Created usable bounding box tensors from the model's predictions

Image Segmentation with U-Net

Personal Project

- Implement semantic image segmentation on the CARLA self-driving car dataset
- Built a U-net model from scratch (Encoder, Decoder)
- Applied sparse categorical crossentropy for pixelwise prediction

Interactive Word Embeddings using Word2Vec and Plotly

Personal Project

- Used NLP techniques to generate word embeddings, using Word2Vec
- These word embeddings can be used for recommendations in an online store based on added items in a basket, or to suggest alternative items as replacements when stock is limited
- Built this recommendation/discovery feature in an interactive and aesthetic visualization tool, Plotly

News Recommendation System using DKN

Personal Project

- Deep Knowledge-Aware Network (DKN) corporates with both NLP and CNN techniques together
- Applied Kim-CNN (KCNN) that fuses semantic-level and knowledge-level representations of news treats words ,entities ad contexts as multiple channels
- Finally, users' diverse interests are followed by attention module
